

Experimental Training Board has been designed specifically for the study of Frequency Modulation and Demodulation. Practical experience on this board carries great educative value for Science and Engineering Students.

Object:

01. To observe the effect of D.C. voltage on frequency of carrier waveform
02. To frequency modulate the carrier with Audio signal, observe F.M. waveform on C.R.O., and measure its modulation index
03. To demodulate the F.M. signal and observe the output on C.R.O.
04. To plot the characteristics curve of the slope detector demodulating circuit

Features:

The board consists of the following built in parts:

01. $\pm 12V$ D.C. at 100 mA, IC Regulated Power Supply
 02. Carrier generator circuit which generates the carrier signal
 03. Audio frequency modulating signal
 04. Variable D.C. is provided to see the frequency deviation in carrier frequency
 05. Frequency Modulation circuit with buffer stage at the output
 06. Demodulating circuit
 07. Adequate no. of other electronic components
 08. Mains ON/OFF switch, Fuse and Jewel light
- The unit is operative on $230V \pm 10\%$ at 50Hz A.C. Mains
 - Adequate no. of patch cords stackable from rear both ends 4mm spring loaded plug length $\frac{1}{2}$ metre
 - Good Quality, reliable terminal/sockets are provided at appropriate places on panel for connections & observation of waveforms
 - Strongly supported by detailed Operating Instructions, giving details of Object, Theory, Design procedures, Report Suggestions and Book References

Other Apparatus Required:

- Decade Audio Frequency Generator Order Code - 16903
- Digital Frequency Counter, 6 digit Order Code - 16904
- Cathode Ray Oscilloscope 20MHz

Note: Specifications are subject to change.
